

## MY FINAL PROJECT

Oh it feels so good that I'm done working on this project and yet I don't have enough time to finish designing the cover for the project but the circuits are working well and I'm glad because they make it easier for me to design the last part of this project.

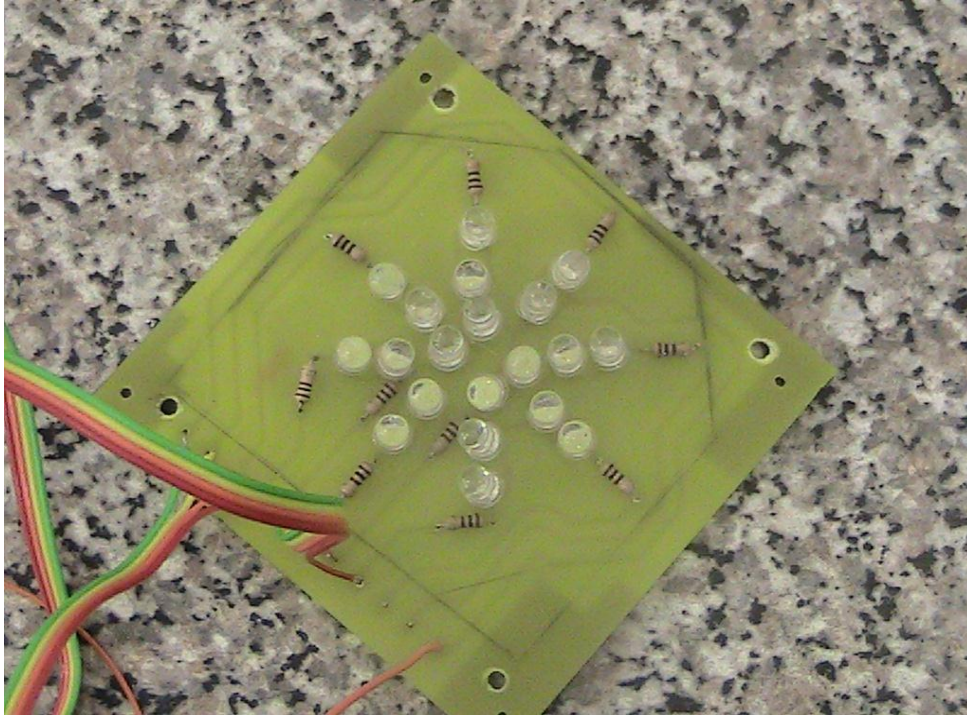

Here are some pictures of the working circuit:

The microcontroller circuit working perfectly and responding well according to the program that I made.

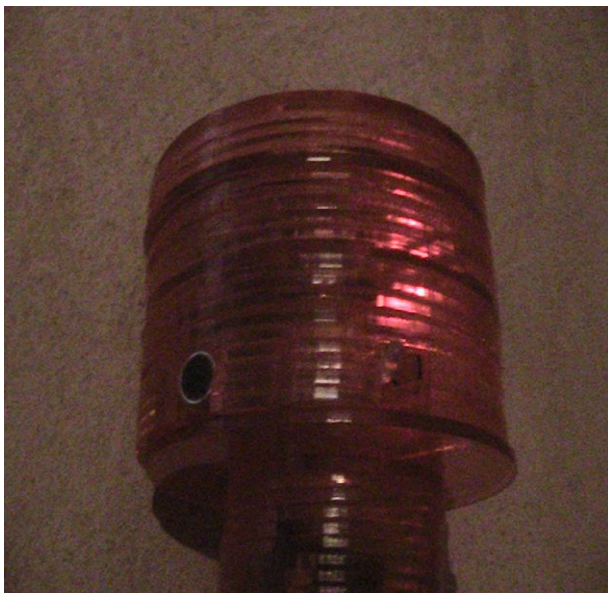

The microphone circuit responds well but I have to change my microphone as it doesn't respond well look at the video below.

The leds are highly bright and protected and they work well.

Here is the designed cover for my final project that I have been working on for the last 5days trying to come up with a good design for this project.
