

## ASSIGNMENT NAME: SCANNING AND PRINTING

In this assignment I decide to scan a perks as it is small and were asked to scan something of at least 5cmx5cm so I only had one option just to scan something of that size then I found a perks then scanned it and it didn't take too long to finish scanning it took about 1hour 30minutes then it was finished and it looked like this

Then changed it to look smooth by pressing the rendering button which made it smooth and it looked like this:

Then from here I send the perks.stl to Barcelona so that the perks can be printed into a 3D model.

Here is the 3D model product that was printed on 3D printer at Barcelona
