

MOLDING AND CASTING

In this assignment I made a mold containing my nickname (king) for my molding and casting as I spent lots of time trying to find modela drivers for my laptop and I saw that time was no longer in my side and I needed to finish other assignments that I didn't complete

My output preview made from Roland virtual modela software

It took me about +/- 8 hours to complete cutting this design on the Roland Modela to be a perfect thing as the was another one that I did cut but it didn't come out well as it needed more time that I didn't have

Here is my final product that I made on the machine

The first piece made on wax

The second piece made from rubber

My final product made from hydro-cement
